

PROJECT OVERVIEW

Title

The Ghana LEAP 1000 Cash Transfer Program and Household Welfare.

Author

Jessica Naa L. France.

Objective

Estimate the impact of Ghana's LEAP 1000 cash transfer program on household welfare using panel survey data and quasi-experimental methods.

Target population

Poor households with pregnant women, lactating mothers, and/or infants under 12 months in Northern and Upper East Ghana.

Dataset

LEAP 1000 Impact Evaluation dataset, baseline 2015 and endline 2017.

Geographic coverage

Bongo, East Mamprusi, Garu-Tempane, Karaga, and Yendi districts.

Outcomes

- Food security.
- Savings.
- Stress.

Methodology

- Difference-in-Differences.
- Linear probability and linear regression models.
- District fixed effects.
- Robust standard errors.
- Lagged one-difference robustness checks.
- Heterogeneous effects by district.

Main findings

- About a 6 percentage point increase in the probability of consuming three or more meals per day.
- Roughly GHC5 to GHC5.5 higher monthly savings.
- No statistically significant effect on stress outcomes.
